Brief in detail

Our clients approached us after recently settling into their dream home.

The brief was to create an immersive outdoor luxury spa, with a bespoke kitchen and entertaining area.

Their main objectives were that the garden must be useable all year round and have a high-end luxury finish.

The key features in creating this design were building the western red cedar garden building with a fully fitted kitchen, gas barbeque, bespoke extraction, wine cooler, fridge and quartz bar area which framed the magnificent views of their garden.

The garden room also hosts a very well-equipped wet room consisting of a shower, wash hand basin and toilet. To complete the roof of the garden building, we installed 2 rectangular glass ceiling lanterns and finished with a sedum green roof system. The garden building also includes heating, spot lights and power sockets.

Following on from the garden building is the hot tub area. It is semi-sunk with a shrouding of grey porcelain, which also incorporates seating. Western red cedar cladding and wall mounted up and down lighters provide the perfect backdrop to relax. In order to make the walk to the spa enjoyable all year round we installed under floor heating to the porcelain patio surrounding the hot tub and leading back into the garden building. With the expanse of the porcelain patio it was important to encompass floor level integrated planters with stunning agapanthus and verbena. Along with a focal point gas fire pit.
